Messner[®]
moves water...

The logo graphic consists of several curved, overlapping lines in red, orange, yellow, green, and blue, suggesting movement and water.A close-up photograph of a green leaf with several clear water droplets resting on its surface. The background is a soft, out-of-focus green. The image is framed by a white, curved border that resembles a water droplet or a lens.

2011/2012

Fresh and clear for 2011

Dear business partners,

You know us as a reliable manufacturer of innovative pond products „made in Germany“. For more than 30 years we have been working together with you in the pond market.

More than 60 people apply all their experience and knowledge for the ponds of tomorrow, and thus for your satisfied customers - and nothing should change in this regard in the future.

After more than 20 years „under the rainbow“ with this catalogue we would like to introduce our new Corporate design to you for the first time. The fresh layout, clear lines and high transparency will accompany us through all levels of the marketing of our products in the future. In an unostentatious framework you will find sales arguments, large-area product illustrations and technical data for each product – all in an easy-to-understand structure. Thus we also achieve greater perceived value externally and support you in the successful business with our products. True to our philosophy, in the new packaging, as before, you will find functional products with above-average customer benefits at prices that are in-line with the market.

This is also reflected in the recent innovations, e.g. in the technical data of the X2 and tec2 pump product lines, the second generation of our eco and power pumps! With up to 40% better performance curves in the operating points proven in practice, particularly the X2-plus pumps confirm our competence in handling resources responsibly. In addition to these energy-saving pump product lines, in 2011 we will introduce the N-series, our offering for the entry-level segment with a high level of functionality.

Accompany us into the new Messner world of the ponds of tomorrow – we think you will be pleased!
